(54) SYSTEM FOR CALCULATING NETWORK OPERATING COST**(57) Abstract:**

PURPOSE: A network operating cost calculation system is provided to calculate a network operating cost by extracting a network operating cost calculation model, analyzing network cost elements, and considering input parameters. CONSTITUTION: The system comprises a system database(11), a database management module(12), an operating cost calculation module(13), and a data output module(14). The system database(11) includes an equipment list management database, an operating cost management database, and an equipment management database. The database management module(12) offers a menu needed for constructing the system database(11), offers a network equipment data search function, and processes a data input, a data modification and a data deletion function. The operating cost calculation module(13) calculates the network operating cost data by using a cost calculation function. The data output module(14) graphically processes the network operating cost data, and outputs the processed data according to each format.
